- Blinds between the Glass

Only available in neutral white. Blinds raise, lower, tilt

Blinds Between the Glass Operation Instructions and Warranty

Caution: Operate blinds slowly to avoid damage to internal components.

Tilting the Blinds

Slowly slide the upper control bar up or down to adjust the angle of the blinds. Moving the upper control bar to its extreme lowest position will tighten the blinds into a maximum privacy position. Please note that the blinds cannot be raised or lowered while in maximum privacy position.

Raising and Lowering the Blinds

Before attempting to raise or lower the blinds, make sure the blinds are not in the maximum privacy position by tilting the blinds into a horizontal position. Slowly slide the lower control bar up or down to raise and lower the blinds. Once the desired height is attained, tilt the blinds to the desired angle.

Troubleshooting

Caution: Never operate both control bars simultaneously as damage to internal components may occur.

Problem: The blinds seem to catch or bind when raised or lowered becoming uneven

Possible Cause: Operating too fast, blinds not in a horizontal position before adjusting height

Solution: Tilt the blinds into a horizontal position then raise or lower the blind until alignment is achieved

Problem: The blinds do not move when the control bar is operated

Possible Cause: Operating too fast, forcing the control bar past the normal operating range

Solution: The control bar is connected to the internal components with magnets. During swift movement of the control bar, these magnets may separate. Slowly move the control bar to the lowest position then up to the highest position. Once you align the magnet on the control bar and the internal magnet you will feel these engage. Once engaged, operate the blinds to the fullest positions and return to normal operation.

Warranty

MGM Industries, Inc. warrants the blinds between the glass and all attached components of such for (1) one year from date of installation against defects in material and workmanship. This warranty covers materials only and MGM Industries, Inc. will assume no other expense such as labor costs of any kind for removal or reinstallation. Defective products or parts must be returned to MGM Industries, Inc. freight prepaid.

Insulated glass with blinds are warranted against failure for (1) one year from date of installation. Glass failure is a material obstruction of vision resulting from moisture, dust, or film formation between the interior glass surfaces of the insulated glass unit. Glass breakage and stress cracks are not covered under this warranty. Any after factory alterations to the doors or glass will void the warranty.

MGM Industries, Inc. is not liable for any incidental or consequential damages resulting from any defect. Some states do not allow limitations on how long an implied warranty lasts or the exclusion or limitation of incidental or consequential damages; therefore, the above limitation or exclusion may not apply to you.

This warranty is extended to the original purchaser and is in lieu of all other guarantees or warranties expressed or implied and does not apply to the product's normal deterioration, accidents, acts of God, fire, abuse, neglect, misuse or installation other than as recommended by MGM Industries, Inc. This warranty gives you specific legal rights and you may have other rights, which vary from state to state.

Pre-Installation Notice:

DO NOT NAIL THROUGH THE VINYL BRICKMOLD ON EXTERIOR OF DOOR DURING THE INSTALLATION.

Product Preparation:

Each door (regardless of configuration) is shipped with protective wrapping and corner gussets to minimize damage to the finishes of the door and the hardware components. Once the rough opening is prepared these packaging materials should be removed from the door. Be careful not to discard any hardware attached to the protective wrapping material. Before installing the door make sure the panel is in the locked position.

Notes:

Each active panel is shipped with spacing shims at both the head and sill 6" from each corner nearest the locking stile. These shims are left in position until the door is checked for final operation in a later step.

Each door comes with an extruded brickmold already attached to the frame along the head and both jambs. **THIS BRICKMOLD IS NOT TO BE NAILED INTO.** This profile is used as both an aesthetic feature and to provide a common gauging surface for a flush door in the rough opening. The door is held into the rough opening using fasteners through the vinyl framing in all applications. The number and location of fasteners is dependent upon the style of the door, which are described in the document.

Preparing the Rough Opening:

Make sure the rough opening is properly dimensioned to the door frame size. The rough opening must be 1/2" greater than the door frame in width and height. Check the hinge side of the opening to assure it is completely plumb. Check floor for level. The still plate may require shimming to assure levelness. The sill profile requires support along its entire span or deformations may occur. Check for obstructions in the swing plane of the door panel.

Installing a Single (X) Door:

1. A 1/4" bead of silicone should be run on the backside of the brick mold along the jambs and head of the frame and a 1/2" bead should be run along the sill at the leading edge of the rough opening.
2. Set the door into the rough opening. **Note: Sliding door into rough opening will remove silicone from sill and will not achieve proper seal. Setting door into rough opening will assure proper seal.**
3. Open door and check for plumb on hinge side. Use shims if necessary to plumb hinge side of door. Remove top screw from each hinge and replace with supplied Flat Head 3" Stainless Steel Screws. Check hinge side jamb for plumb. Close door.
4. Check spacing on top of door to assure proper sight line. Shim between head and rough opening if necessary. When satisfactorily positioned install supplied Truss Head 3" Stainless Steel Screws through predrilled holes in head.
5. Check spacing on jamb side opposite the hinge (striker jamb) to assure proper sight line. Shim between jamb and rough opening if necessary. When satisfactorily positioned, shim behind top, center and bottom striker plates. Remove existing screws and install supplied Flat Head 3" Stainless Steel Screws through top, center and bottom striker plates.

6. Open door and remove bottom screw from each hinge. Replace with supplied Flat Head 3” Stainless Steel Screws.
7. Check spacing on all sides of door slab to assure equal sight lines.
8. The hinges on the active panel are adjustable. The top and bottom hinges can be adjusted to move the sash horizontally toward and away from each jamb. The center hinge can be adjusted for vertical up and down movement. These hinge adjustments can be made if the margins are still not acceptable after the door has been adjusted within the rough opening.
9. Remove the spacing shims at the head and sill.
10. Complete the “Finishing the Installation” procedures listed at the end of this document.

Installing a 2 or 3 Panel Door with Hinges on the Jamb (OX, XO, OOX, XOO)

1. A 1/4” bead of silicone should be run on the backside of the brick mold along the jambs and head of the frame and a 1/2” bead should be run along the sill at the leading edge of the rough opening.
2. Set the door into the rough opening. **Note: Sliding door into rough opening will remove silicone from sill and will not achieve proper seal. Setting door into rough opening will assure proper seal.**
3. Open door and check for plumb on hinge side. Use shims if necessary to plumb hinge side of door. Remove top screw from each hinge and replace with supplied Flat Head 3” Stainless Steel Screws. Check hinge side jamb for plumb. Close door.
4. Check spacing on top of door to assure proper sight line. Shim between head and rough opening if necessary. When satisfactorily positioned install supplied Truss Head 3” Stainless Steel Screws through predrilled holes in head. All predrilled holes must receive a screw.
5. Check spacing on the fixed panel jamb to assure proper sight line. Shim between jamb and rough opening if necessary. When satisfactorily positioned, shim behind each of the predrilled holes in the jamb and install supplied Truss Head 3” Stainless Steel Screws. All predrilled holes must receive a screw.
6. Open door and remove bottom screw from each hinge. Replace with supplied Flat Head 3” Stainless Steel Screws.
7. Check spacing on all sides of door slab to assure equal sight lines.
8. The hinges on the active panel are adjustable. The top and bottom hinges can be adjusted to move the sash horizontally toward and away from each jamb. The center hinge can be adjusted for vertical up and down movement. These hinge adjustments can be made if the margins are still not acceptable after the door has been adjusted within the rough opening. Only use a hand screwdriver when adjusting hinges.
9. Remove the spacing shims at the head and sill.
10. Complete the “Finishing the Installation” procedures listed at the end of this document.

Installing a 2 or 3 Panel Door with Hinges on the Center Mull Post (ox, xo, oox, oxo, xoo)

1. A 1/4" bead of silicone should be run on the backside of the brick mold along the jambs and head of the frame and a 1/2" bead should be run along the sill at the leading edge of the rough opening.
2. Set the door into the rough opening. **Note: Sliding door into rough opening will remove silicone from sill and will not achieve proper seal. Setting door into rough opening will assure proper seal.**
3. Open door and check for plumb on striker plate side. Use shims if necessary to plumb striker plate side of door. Remove top screw from each strike plate and replace with supplied Flat Head 3" Stainless Steel Screws. Check striker side jamb for plumb. Close door.
4. Check spacing on top of door to assure proper sight line. Shim between head and rough opening if necessary. When satisfactorily positioned install supplied Truss Head 3" Stainless Steel Screws through predrilled holes in head. All predrilled holes must receive a screw.
5. Check spacing on the fixed panel jamb to assure proper sight line. Shim between jamb and rough opening if necessary. When satisfactorily positioned, shim behind each of the predrilled holes in the jamb and install supplied Truss Head 3" Stainless Steel Screws. All predrilled holes must receive a screw.
6. Open door and remove bottom screw from each strike plate. Replace with supplied Flat Head 3" Stainless Steel Screws. Also remove and replace the center screw from the deadbolt strike plate.
7. Check spacing on all sides of door slab to assure equal sight lines.
8. The hinges on the active panel are adjustable. The top and bottom hinges can be adjusted to move the sash horizontally toward and away from each jamb. The center hinge can be adjusted for vertical up and down movement. These hinge adjustments can be made if the margins are still not acceptable after the door has been adjusted within the rough opening. Only use a hand screwdriver when adjusting hinges.
9. Remove the spacing shims at the head and sill.
10. Complete the "Finishing the Installation" procedures listed at the end of this document.

Finishing the Installation:

- Insulate between door frame and rough opening. **Note: Over packing these areas may cause frame members to bow.**
- Apply silicone around the exterior of the door.
- Finish door perimeter and install the supplied hole plugs where needed.
- Install handle sets as per directions provided inside of the hardware box.
- Check operation of all components and make adjustments as needed.
